

## Approved Antivirus Clients

Students are required to protect their Windows-based computers with an approved and up-to-date antivirus client. Taylor has approved several antivirus programs which provide reasonable protection against viruses and malware. Some are free for personal use, others must be purchased. Be sure to install upgrade to latest version every year.

*Note: During registration, Bradford Persistent Agent will be installed to monitor the status of each PC's Antivirus. This unobtrusive program will allow students to use the network.*

Any of these antivirus solutions will pass TUCAN Registration. Install **only one** of the following antivirus clients to minimize complications. Installing more than one antivirus software can not only cause your computer to run slowly, but they may conflict with one another and cause PC issues.

### Free Clients

- Microsoft Security Essentials: [Download](#) (recommended)
